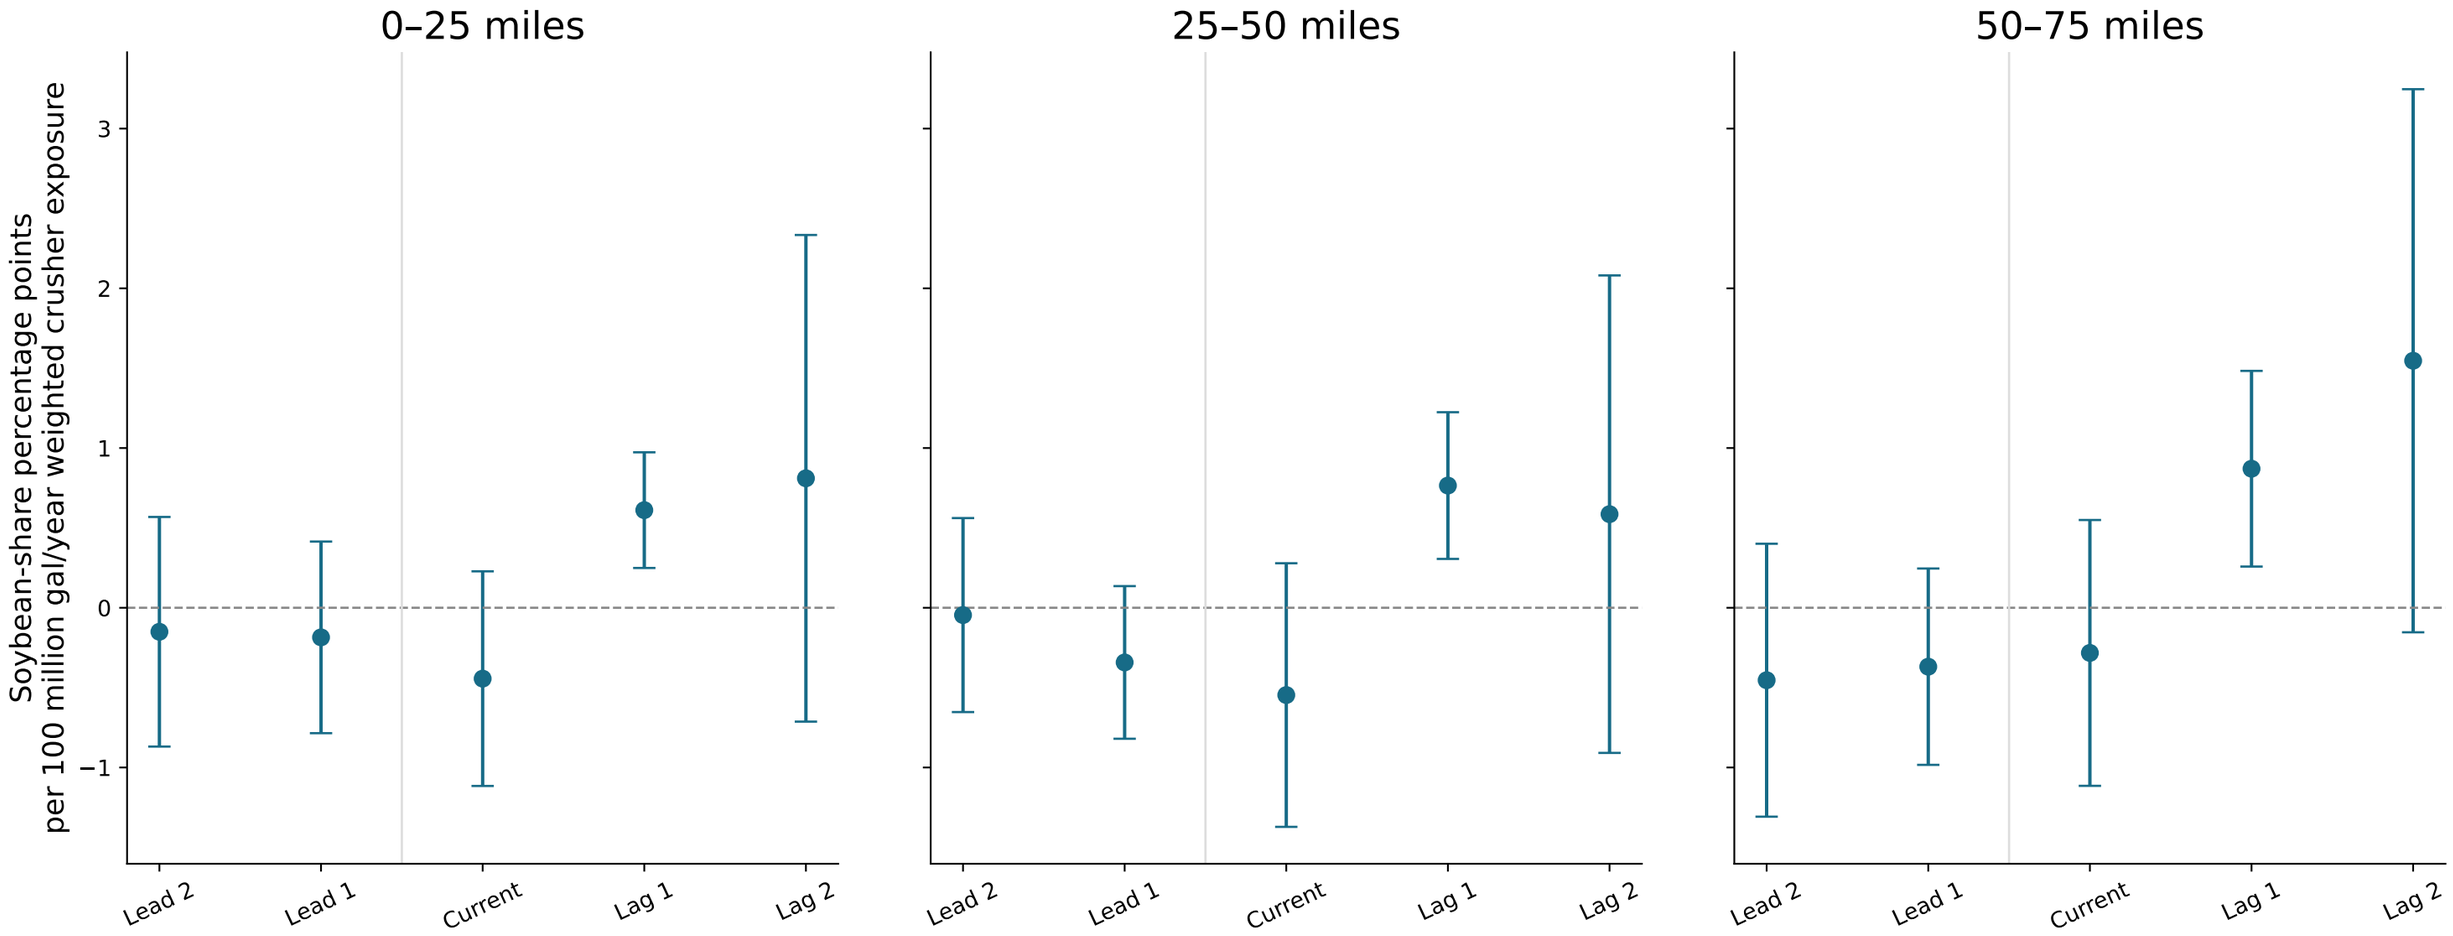
Anticipation, current exposure and delayed response estimated jointly



Normalized inverse-square transport-cost allocation. All five exposure terms enter the same regression.
Non-water soybean share; crusher–ring and ring–year fixed effects; crusher-clustered 95% intervals.

2016–2023 common sample: two leads exclude 2024–2025 outcomes. Conditional stock-exposure coefficients, not an approval-event study.
Lag-one coefficients are contributions, not net one-year effects. Multiple testing; observational estimates.
